DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

None of the prior art of record is seen to disclose or suggest the limitation of claim 16 that wherein on an outer end surface of the flange, an end of an innermost layer disposed on an inner side of the container including an upper surface of the flange extends over and covers an end of an adjacent layer adjacent to the innermost layer and formed on the flange toward a bottom side of the container; and a seal resin welding the lid to the flange is melted and flowed to an outer surface of the end of the innermost layer at least on an opening part of the lid. For example, the closest reference found, Tamura, teaches a container with a flange where a lid is attached but does not teach wherein on an outer end surface of the flange, an end of an innermost layer disposed on an inner side of the container including an upper surface of the flange extends over and covers an end of an adjacent layer adjacent to the innermost layer and formed on the flange toward a bottom side of the container; and a seal resin welding the lid to the flange is melted and flowed to an outer surface of the end of the innermost layer at least on an opening part of the lid.

None of the prior art of record is seen to disclose or suggest the limitation of claim 18 that wherein on an outer end surface of the flange, an end of an innermost layer disposed on an inner side of the container including an upper surface of the flange extends over and covers an end of an adjacent layer adjacent to the innermost layer and formed on the flange toward a bottom side of the container, the flange of the

container and the lid are welded by a first seal part having a predetermined width and formed to enclose the opening and a second seal part formed within an area of the first seal part to enclose the opening along the first seal part, the second seal part having a width narrower than that of the first seal part, and a seal resin of the second seal part is melted and flowed to the outer surface of the end of the innermost layer of the flange at a position corresponding to the opening tab of the lid. For example, the closest reference found, Tamura, teaches a container with a flange where a lid is attached but does not teach wherein on an outer end surface of the flange, an end of an innermost layer disposed on an inner side of the container including an upper surface of the flange extends over and covers an end of an adjacent layer adjacent to the innermost layer and formed on the flange toward a bottom side of the container, the flange of the container and the lid are welded by a first seal part having a predetermined width and formed to enclose the opening and a second seal part formed within an area of the first seal part to enclose the opening along the first seal part, the second seal part having a width narrower than that of the first seal part, and a seal resin of the second seal part is melted and flowed to the outer surface of the end of the innermost layer of the flange at a position corresponding to the opening tab of the lid.

None of the prior art of record is seen to disclose or suggest the limitation of claim 19 that setting a cutting die on a surface opposite to an innermost layer located on an inner side of the container body, and die-cutting the multilayer sheet at an outer circumference of a part corresponding to the flange so that on an outer end surface of the flange, an end of the innermost layer disposed on the inner side of the container

including an upper surface of the flange extends over and covers an end of an adjacent layer adjacent to the innermost layer and formed on the flange toward a bottom side of the container. For example, the closest reference found, Tamura, teaches a container with a flange where a lid is attached but does not teach setting a cutting die on a surface opposite to an innermost layer located on an inner side of the container body, and die-cutting the multilayer sheet at an outer circumference of a part corresponding to the flange so that on an outer end surface of the flange, an end of the innermost layer disposed on the inner side of the container including an upper surface of the flange extends over and covers an end of an adjacent layer adjacent to the innermost layer and formed on the flange toward a bottom side of the container.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
